SUBJECT INDEX

A

Abiotic perturbations
  edaphic arthropod adaptaptions and, 233–52
abrupt vein gene
  Dipteran wing veins and, 110
Abundance
  canopy mites and biodiversity, 1–13
Acacia spp.
  Anthocoridae bionomics and, 217–18, 222
Acalypteratae
  Dipteran wing veins and, 115
Acanthomia spp.
  insect pests of pigeonpea and, 82
Acari
  forest canopy biodiversity and, 1–13
  insect pests of pigeonpea and, 84
  pathogens and predators of ticks, 159–74
Acerola
  stingless bees in crop pollination, 198
Achaete-scute complex
  Dipteran wing veins and, 110
Acheta domesticus
  insects as human food and, 44–45
Achillea millefolium
  odor-mediated behavior of Afrotropical malaria mosquitoes and, 138
Achiote
  stingless bees in crop pollination, 192
Achipteriidae
  canopy mites and biodiversity, 4
Acomporis spp.
  Anthocoridae bionomics and, 213, 215–16
Acroceridae
  Dipteran wing veins and, 118, 120
Adamystidae
  canopy mites and biodiversity, 9
Adaptive strategies
  edaphic arthropods and, 233–52
Adhaesozetes spp.
  canopy mites and biodiversity, 4–5, 8
Adoxyphyes spp.
  Lepidoptera control by baculoviruses and, 262
Adult life
  Cerambycid reproductive behavior and, 483–99
  density-dependent physiological phase and, 317–34
  entomophagous insects and, 561–79
Aedes spp.
  emerging and resurging vector-borne diseases, 53, 55–58
  odor-mediated behavior of Afrotropical malaria mosquitoes and, 136–39, 141, 144, 147
Aeigiale hesperiaris
  insects as human food and, 37–38
Africa
  Anthocoridae bionomics and, 209, 212, 221
  canopy mites and biodiversity, 10
  cassava pest management and, 343–45, 348–54, 357, 360–61
  emerging and resurging vector-borne diseases, 53, 57–67, 69
  insect pests of pigeonpea and, 78, 81–85, 87–88, 90
  insects as human food and, 23–31, 43, 45
  Lepidoptera control by baculoviruses and, 261, 263, 265–66
  odor-mediated behavior of Afrotropical malaria mosquitoes and, 131–49
  pathogens and predators of ticks, 165, 167, 169, 171, 173
  stingless bees in crop pollination, 194
Afrocypholealaps spp.
  canopy mites and biodiversity, 10
Afrotropical malaria vectors
  odor-mediated behavior and, 132–49
Agavaceae
  stingless bees in crop pollination, 198
Agave sisalana
  stingless bees in crop pollination, 198
Age
  higher-level phylogeny of Diptera and, 396–421
Agelenopsis aperta
  insect voltage-gated sodium channel and, 448
Aggregation pheromones
  density-dependent physiological phase and, 329–30
Agria housei
  entomophagous insects and, 568, 573
Agroecosystems
  Anthocoridae bionomics and, 207–22
Agrotis segetum
  Lepidoptera control by baculoviruses and, 262
Albizzia spp.
  Anthocoridae bionomics and, 222
albovittata gene
  Dipteran wing veins and, 120
Alcalypterae
  higher-level phylogeny of Diptera and, 397–421
Algeria
  emerging and resurging vector-borne diseases, 61
Algophagidae
  canopy mites and biodiversity, 8
N-Alkylamides
  insect voltage-gated sodium channel and, 429–52
Alliaceae
  stingless bees in crop pollination, 193
Allium cepa
  stingless bees in crop pollination, 193
Allonemobius socius
  population biology and, 551
Allosteric coupling
  insect voltage-gated sodium channel and, 429–52
Alofa spp.
  Anthocoridae bionomics and, 217

Alophora nasalis
insect pests of pigeonpea and, 84
Alternative pollinators
stingless bees in crop pollination, 183–200
Alydidae
insect pests of pigeonpea and, 82
Amazonia
canopy mites and biodiversity, 6
cassava pest management and, 352
emerging and resurging vector-borne diseases, 66
stingless bees in crop pollination, 192, 198
Amazon tree grape
stingless bees in crop pollination, 192
Amblyomma americanum
emerging and resurging vector-borne diseases, 59–60
Ameroseiidae
canopy mites and biodiversity, 6–7
Amphiareaus spp.
Anthocoridae bionomics and, 217
Amphibians
pathogens and predators of ticks, 168
Anabrus simplex
insects as human food and, 44–45
Anacardiaceae
stingless bees in crop pollination, 191
Anagasta kuehniella
Anthocoridae bionomics and, 223
Anagrapha falcifera
Lepidoptera control by baculoviruses and, 262
Anagrus delicatus
population biology and, 553
Anal morphology
Dipteran wing veins and, 102–4, 116
Anaphe venata
insects as human food and, 25
Anastasus spp.
entomophagous insects and, 571, 577–78
insect pests of pigeonpea and, 83
Anemonia sulcata
insect voltage-gated sodium channel and, 437, 441, 448
Annatto
stingless bees in crop pollination, 192
Angiosperms
canopy mites and biodiversity, 13
Angola
insects as human food and, 23–25
Animal associates
canopy mites and biodiversity, 1, 3–4, 10–11
Animal prey
Anthocoridae bionomics and, 213–14
Anisopodidae
Dipteran wing veins and, 116
Anisoptera polyandra
insects as human food and, 34
Annual crops
Lepidoptera control by baculoviruses and, 261, 264–66
Anopheles spp.
emerging and resurging vector-borne diseases, 55, 57, 63–66, 69
odor-mediated behavior of Afrotropical malaria mosquitoes and, 132–49
Anoplecnemis spp.
insect pests of pigeonpea and, 82
Antennal morphology
Cerambycid reproductive behavior and, 495
Antheraea peryni
entomophagous insects and, 570
Anthocoridae
bionomics and
agroecosystems, 218–23
animal prey, 213–14
artificial habitats, 222
chemical ecology, 214–15
family classification, 209–10
flight, 211
food and feeding, 213–15
future research, 223
Hawaiian Islands, 212–13
Hemiptera, 208
Heteroptera, 208
introduction, 208, 212–13
natural ecosystems, 215–18
ornamentals, 221–22
plants, 214
stored products, 222–23
systematics, 208–10
trees, 219–21
trivial movement, 210–11
wing polymorphism, 211–12
zoophytophagy, 214
insect pests of pigeonpea and, 87
Anthonomus grandis
entomophagous insects and, 578
Anthophorini
stingless bees in crop pollination, 195
Anthracinae
Dipteran wing veins and, 112
Anticarsia gemmatalis
Lepidoptera control by baculoviruses and, 257–81
Antilochus coqueberti
insect pests of pigeonpea and, 84
Ants
Anthocoridae bionomics and, 207–22
canopy mites and biodiversity, 3, 12
hyperparasitism and, 291–309
pathogens and predators of ticks, 159, 167–68
Anystidae
canopy mites and biodiversity, 9
Aphids
chemical control of virus vectors, 464–65
hyperparasitism and, 291–309
Aphytis spp.
entomophagous insects and, 568
Apiaceae
stingless bees in crop pollination, 197
Apidae
stingless bees in crop pollination, 183–200
Apis spp.
insects as human food and, 28, 36
stingless bees in crop pollination, 191–96, 198
Apoidea
canopy mites and biodiversity, 12
edaphic arthropod adaptaptions and, 242
Application timing
Lepidoptera control by baculoviruses and, 274–75
Application technology
Lepidoptera control by baculoviruses and, 276
approximated gene
Dipteran wing veins and, 119
Arachnid venom
insect voltage-gated sodium channel and, 429–52
Araneida
pathogens and predators of ticks, 166

Arboral fauna
canopy mites and biodiversity, 1–13
Arboviruses
emerging and resurging vector-borne diseases, 69
Archytas marmoratus
entomophagous insects and, 574
Arecaceae
stingless bees in crop pollination, 191, 196
Argentina
cassava pest management and, 355, 359
Lepidoptera control by baculoviruses and, 267, 270
Ariadna bicolor
edaphic arthropod adaptaptions and, 241
aristaless gene
Dipteran wing veins and, 109
Arrenurus kitchingi
canopy mites and biodiversity, 8
Arthropods
Anthocoridae bionomics and, 207–22
canopy mites and biodiversity, 1–13
edaphic
adaptive strategies and, 233–52
emerging and resurging vector-borne diseases, 51–70
entomophagous insects and, 561–79
pathogens and predators of ticks, 159–74
Artificial culture
entomophagous insects and, 561–79
Artifical habitats
Anthocoridae bionomics and, 222
Artocarpus spp.
stingless bees in crop pollination, 196
Arvicanthis niloticus
emerging and resurging vector-borne diseases, 62
Aschiza
Dipteran wing veins and, 116–17
higher-level phylogeny of Diptera and, 397–421
Ascidae
canopy mites and biodiversity, 6–7, 9
Ascobar tabida
entomophagous insects and, 564
Asia
Anthocoridae bionomics and, 221
canopy mites and biodiversity, 10
cassava pest management and, 343–45, 348, 353, 357, 360
emerging and resurging vector-borne diseases, 53, 56–57, 61–66, 68–69
insect pests of pigeonpea and, 78, 81–85, 88, 90
insects as human food and, 31–35, 43, 45
Lepidoptera control by baculoviruses and, 261, 276
Asilidae
Dipteran wing veins and, 112
Asiloidea
higher-level phylogeny of Diptera and, 397–421
Astemocoris spp.
Anthocoridae bionomics and, 211–12
Asteraceae
stingless bees in crop pollination, 194–95
Astigmata
canopy mites and biodiversity, 4, 6, 8
Atractomus mali
Anthocoridae bionomics and, 220
Atta spp.
insects as human food and, 36, 39–40
Australasia
canopy mites and biodiversity, 10
Lepidoptera control by baculoviruses and, 261
Australia
Anthocoridae bionomics and, 209, 212
canopy mites and biodiversity, 5, 7–8, 10–12
Dipteran wing veins and, 98–99
emerging and resurging vector-borne diseases, 57–58
hyperparasitism and, 301
insect pests of pigeonpea and, 81, 90
insects as human food and, 35
Lepidoptera control by baculoviruses and, 264
pathogens and predators of ticks, 167, 171
population biology and, 550–51
stingless bees in crop pollination, 186, 188, 191, 195
Autographa californica
insect voltage-gated sodium channel and, 447
Lepidoptera control by baculoviruses and, 258, 262
Averrhoa carambola
stingless bees in crop pollination, 191–92
Avians
pathogens and predators of ticks, 169–72
Avocado
stingless bees in crop pollination, 197–98
Avoidance learning
hyperparasitism and, 307
Axes
Dipteran wing veins and, 107–8
Axymiomorpha
Dipteran wing veins and, 116
Azadiracta indica
insect pests of pigeonpea and, 88

B

Babesia spp.
pathogens and predators of ticks, 162
Bacteria
edaphic arthropod adaptaptions and, 250
Lepidoptera control by baculoviruses and, 257–81
pathogens and predators of ticks, 159–74
see also Microorganisms
Baculoviruses
Lepidoptera control by
annual crops, 261, 264–66
application technology, 276
application timing, 274–75
environmental manipulation, 260
establishment, 259–60
field efficacy, 274–76
field production, 270–71
forests, 267–69
fruit crops, 266–67
future research, 281
genetic engineering, 279–81
genome, 273
Helicoverpa/Heliothis complex, 261, 264
inoculum potency, 274–75

introduction, 259–60
in vivo sequential passage of baculoviruses on host and non-host insects, 279
laboratory production, 270–71
microbial insecticides, 260–63
nuclear polyhedrosis virus in soybean in Brazil, 269–73
overview, 258–59
perspectives, 258–59
pest control strategies, 259–61
plant substrate, 274–75
problems limiting expansion of baculovirus use, 272, 276–81
resistance, 272–73
seasonal colonization, 260
solar radiation, 275–76
Spodoptera complex, 264–65
substances that enhance baculovirus activity in host insects, 278–79
tea crops, 267
temperature, 275–76
virulence, 273
recombinant
insect voltage-gated sodium channel and, 429–52
Baeus spp.
insect pests of pigeonpea and, 83
Bark
habitats under
Anthocoridae bionomics and, 207–22
canopy mites and biodiversity, 6–7
Barmah Forest virus
emerging and resurging vector-borne diseases, 52, 57–58
Bartonella spp.
emerging and resurging vector-borne diseases, 66–68
Bdellidae
canopy mites and biodiversity, 9
Beauveria spp.
edaphic arthropod adaptaptions and, 244, 251
pathogens and predators of ticks, 159
Bees
hyperparasitism and, 300–1
stingless
crop pollination and, 183–200
Beetles
canopy mites and biodiversity, 12
Cerambycid reproductive behavior and, 483–99
hyperparasitism and, 301–2
pathogens and predators of ticks, 159, 168
Behavior
Cerambycid reproductive behavior and, 483–99
chemical control of virus vectors, 457–70
density-dependent physiological phase and, 317–34
edaphic arthropod adaptaptions and, 233–52
entomophagous insects and, 561–79
hyperparasitism and, 291–309
mate choice in tree crickets and kin, 371–91
odor-mediated
afrotropical malaria mosquitoes and, 132–49
Behavioral phase transition pheromones
density-dependent physiological phase and, 330
Belgium
Lepidoptera control by baculoviruses and, 267
Bellyache bush
stingless bees in crop pollination, 197
Bemisia tabaci
cassava pest management and, 345
Beneficial insects
entomophagous insects and, 561–79
Benin
cassava pest management and, 351
insect pests of pigeonpea and, 83
Bermuda
emerging and resurging vector-borne diseases, 55
Bet-hedging
population biology and, 535–56
Betula spp.
Anthocoridae bionomics and, 218
Bias
Western
insects as human food and, 21–45
Bibionidae
Dipteran wing veins and, 116
Bibionomorpha
Dipteran wing veins and, 116
Biodiversity
canopy mites and, 1–13
Bioinsecticides
recombinant
baculovirus-mediated, insect voltage-gated sodium channel and, 429–52
Biological control
Anthocoridae bionomics and, 207–22
cassava pest management and, 343–62
entomophagous insects and, 561–79
hyperparasitism and, 291–309
Lepidoptera control by baculoviruses and, 257–81
pathogens and and predators of ticks, 159–74
Bionomics
Anthocoridae and, 207–23
odor-mediated behavior of Afrotropical malaria mosquitoes and, 132–49
Biotic perturbations
edaphic arthropod adaptaptions and, 233–52
Birds
canopy mites and biodiversity, 13
pathogens and predators of ticks, 159
Bixa orellana
stingless bees in crop pollination, 192
Black-horned tree cricket
mate choice in tree crickets and kin, 380
Blaptostethus pallescens
Anthocoridae bionomics and, 222
Blatella germanica
insect voltage-gated sodium channel and, 449
Blediius palipennis
edaphic arthropod adaptaptions and, 245
Blephariceromorpha
higher-level phylogeny of Diptera and, 397–421
Blepharoceroidea
Dipteran wing veins and, 116
Body lice
emerging and resurging vector-borne diseases, 66–67

Body shape
edaphic arthropod adaptaptions and, 245–46
Body size
canopy mites and biodiversity, 1–13
Bolivia
cassava pest management and, 349
Lepidoptera control by baculoviruses and, 266
Bolivian hemorrhagic fever
emerging and resurging vector-borne diseases, 52
Bombyliidae
Dipteran wing veins and, 112
hyperparasitism and, 300
Bombyx mori
insects as human food and, 45
Bottom-up effects
hyperparasitism and, 292
Brachycera
Dipteran wing veins and, 112, 116
higher-level phylogeny of Diptera and, 397–421
Brachymeria spp.
entomophagous insects and, 568, 571
Brachyptery
population biology and, 552
Brachypylina
canopy mites and biodiversity, 4
Brachysteles spp.
Anthocoridae bionomics and, 210, 213, 215–16
Brachytrupes membranaceus
insects as human food and, 31
Bracon spp.
entomophagous insects and, 571
Brazil
cassava pest management and, 344–62
emerging and resurging vector-borne diseases, 55–56, 58, 62–63, 66
insects as human food and, 35–36, 40
Lepidoptera control by baculoviruses and, 257–81
pathogens and predators of ticks, 162, 168, 171
population biology and, 551
stingless bees in crop pollination, 185–86, 191–94, 196–98
Brazzaville
insects as human food and, 25
Breadfruit
stingless bees in crop pollination, 196
Brill-Zinsser's disease
emerging and resurging vector-borne diseases, 67
British Columbia
Anthocoridae bionomics and, 215, 219, 221
broad gene
Dipteran wing veins and, 119
Bruchid beetles
hyperparasitism and, 302
Bugs
Anthocoridae bionomics and, 207–22
cassava pest management and, 357–59
pathogens and predators of ticks, 166
Bunaea alcinoe
insects as human food and, 29
Burkina Faso
emerging and resurging vector-borne diseases, 64
Burrower bug
cassava pest management and, 357–59
Buzura suppressaria
Lepidoptera control by baculoviruses and, 262
Byrsonima crassifolia
stingless bees in crop pollination, 198

C

Cajanus cajan
insect pests and
flower and pot-feeding Lepidoptera, 79–82
flower and pot-sucking Hemiptera, 82–84
flower and seed-feeding Diptera, 84–85
flower and seed-feeding Hymenoptera, 84–85
future research, 90–91
introduction, 78–79
management, 88–90
multitrophic interactions, 85–88
Calamus spp.
stingless bees in crop pollination, 196
Caledia captiva
population biology and, 550–51
California
Anthocoridae bionomics and, 222
Lepidoptera control by baculoviruses and, 265
Callosobruchus chinensis
insect pests of pigeonpea and, 86–87
calmodulin gene
Dipteran wing veins and, 111
Calosoma sycophanta
entomophagous insects and, 574
Calyptratae
Dipteran wing veins and, 115, 117
Cameroon
cassava pest management and, 345, 349
Camisiidae
canopy mites and biodiversity, 4
Campoletis sonorensis
entomophagous insects and, 572–73
Camu-camu
stingless bees in crop pollination, 192
Canada
Anthocoridae bionomics and, 209, 215–16, 219, 221
canopy mites and biodiversity, 5, 7
emerging and resurging vector-borne diseases, 55
insects as human food and, 37
Lepidoptera control by baculoviruses and, 259, 263, 268
Cannaceae
stingless bees in crop pollination, 197
Cannibalism
pathogens and predators of ticks, 165–66
Canopy mites
biodiversity and
Acarine symbionts of animals, 10–11
diversity, 2–5
epicortolous habitats, 6
flowers, 10
fruit, 10
fungal sporocarps, 7
future research, 13
habitats, 5–9, 11
host diversity, 12–13
host size, 12–13
host specificity, 12–13
litter, 2–5
overview, 1–2
perspectives, 1–2
phylloplane, 8–10
phytotelmata, 7–8
sap fluxes, 7–8
size range of Acari, 11–12
size shortfall, 11–13
soils, 2–5

stems, 8
under bark, 6–7
Canthon laevis
edaphic arthropod adaptaptions and, 245
Carabidae
edaphic arthropod adaptaptions and, 247
Carambola
stingless bees in crop pollination, 191–92
Carbohydrate
cassava pest management and, 343
Cardamomum spp.
stingless bees in crop pollination, 198
Cardiastethus spp.
Anthocoridae bionomics and, 217
Cardiochiles nigriceps
entomophagous insects and, 572
Carebara vidua
insects as human food and, 29
Caribbean region
cassava pest management and, 345, 359
emerging and resurging vector-borne diseases, 55, 58
Carludovica palmata
stingless bees in crop pollination, 198
Carobididae
canopy mites and biodiversity, 4
Carya spp.
Anthocoridae bionomics and, 217
Cassava
pest management and
biological control, 350–53, 359–60
biology, 358, 360
cassava burrower bug, 357–59
cassava green mite, 350–51
cassava hornworm, 355–57
cassava lacebugs, 359–60
cassava mealybug, 352–53
cultural control, 350
damage, 358–59
direct feeding damage, 347
future research, 360–62
host plant resistance, 350
indirect feeding damage, 346–47
introduction, 344–45
major pests, 350–60
seasonal yield losses, 347
secondary pests, 347–50
trends, 360–62
whiteflies, 353–55
yield-pest relationships, 345–50
Caterpillars
Lepidoptera control by baculoviruses and, 257–81
Cat flea typhus
emerging and resurging vector-borne diseases, 52
Catolaccus grandis
entomophagous insects and, 571
Cat-scratch disease
emerging and resurging vector-borne diseases, 52, 67–68
Cattle egrets
pathogens and predators of ticks, 170–71
Cecidomyiidae
Dipteran wing veins and, 118, 120
Celaenopsidae
canopy mites and biodiversity, 6
Centers for Disease Control (CDC)
emerging and resurging vector-borne diseases, 54, 59
Central African Republic
emerging and resurging vector-borne diseases, 58
Central Amazon
canopy mites and biodiversity, 6
Central Asia
Lepidoptera control by baculoviruses and, 261
Cephalatrigona capitata
stingless bees in crop pollination, 186
Cepheidae
canopy mites and biodiversity, 4
Cerambycidae
edaphic arthropod adaptaptions and, 245
insects as human food and, 34–35
larval host plant and reproduction
adult diet, 491–92
adult dispersal, 492–93
host location, 491
host tissues, 489–91
mating behavior, 496
mate location and antennal morphology, 495–96
mate location and recognition, 493–95
nutrition, 489
oviposition, 491
introduction, 483–84
larval host condition, 485–96
overview, 497–99
reproductive biology of Cerambycids, 485–96
research needs, 499
subfamilies of Cerambycidae, 484–85
Ceratopogoniidae
emerging and resurging vector-borne diseases, 58
stingless bees in crop pollination, 198
Ceratozetidae
canopy mites and biodiversity, 4
Certomenus bergi
cassava pest management and, 359
Chagas disease
emerging and resurging vector-borne diseases, 62, 69
Chaoborus edulis
insects as human food and, 26
Chayote
stingless bees in crop pollination, 191
Chemical ecology
Anthocoridae bionomics and, 207–22
cytochrome P450 enzymes and, 507–26
Cheyletidae
canopy mites and biodiversity, 9
Chiapas
stingless bees in crop pollination, 191, 194
Chikungunya
emerging and resurging vector-borne diseases, 53
Chile
emerging and resurging vector-borne diseases, 55
stingless bees in crop pollination, 197
Chilo spp.
entomophagous insects and, 577–78
China
Anthocoridae bionomics and, 209
cassava pest management and, 344
emerging and resurging vector-borne diseases, 56, 62, 64
insects as human food and, 33, 45
Lepidoptera control by baculoviruses and, 262–68
stingless bees in crop pollination, 198

Choko
  stingless bees in crop pollination, 191
Choosiness
  mate choice in tree crickets and kin, 375
Chromatic response
  density-dependent physiological phase and, 317–34
Chrysodeixis includens
  Lepidoptera control by baculoviruses and, 259
Chrysomelidae
  edaphic arthropod adaptaptions and, 242
Chrysopa spp.
  entomophagous insects and, 566, 568, 575–76
Chrysoperla spp.
  entomophagous insects and, 566, 568–69, 575–76
Cicadidae
  population biology and, 551–52
Cicindela hybrida
  edaphic arthropod adaptaptions and, 248
Cinara spp.
  Anthocoridae bionomics and, 216
Cirina forda
  insects as human food and, 24–25, 29–30
Cirrula spp.
  Dipteran wing veins and, 112
Citrus spp.
  stingless bees in crop pollination, 196
Cladistics
  higher-level phylogeny of Diptera and, 397–421
Classification
  higher-level phylogeny of Diptera and, 396–421
Clavigralla spp.
  insect pests of pigeonpea and, 77, 82–84, 87–88, 90
Climate
  Lepidoptera control by baculoviruses and, 257–81
Cloning
  insect voltage-gated sodium channel and, 429–52
  population biology and, 554
Clusters
  gene
    cytochrome P450 enzymes and, 507–26
Coccinellid beetles
  hyperparasitism and, 301
Coccivora spp.
  Anthocoridae bionomics and, 211
Cocos Islands
  Anthocoridae bionomics and, 209
Cocos nucifera
  stingless bees in crop pollination, 191
Coffea spp.
  stingless bees in crop pollination, 194
Colembolla
  edaphic arthropod adaptaptions and, 237–40
Coleomegilla maculata lengi
  entomophagous insects and, 566, 574
Coleoptera
  Dipteran wing veins and, 111
  edaphic arthropod adaptaptions and, 242, 245–47
  hyperparasitism and, 301–2
  insects as human food and, 39, 44
  pathogens and predators of ticks, 168
Colias eurytheme
  Lepidoptera control by baculoviruses and, 261
Colombia
  cassava pest management and, 344–62
  emerging and resurging vector-borne diseases, 56
  insects as human food and, 35–36, 39–40
  Lepidoptera control by baculoviruses and, 266
  stingless bees in crop pollination, 198
Color phase
  density-dependent physiological phase and, 317, 321, 323
Comadia retenbachi
  insects as human food and, 38
Commensals
  canopy mites and biodiversity, 4, 10
Commerce
  human
    Anthocoridae bionomics and, 207–22
Community organization
  hyperparasitism and, 291–309
Comstock-Needham/Martynov system
  Dipteran wing veins and, 100–1, 104
Congo
  cassava pest management and, 352–53
  insects as human food and, 23–25
Congo-Crimean hemorrhagic fever
  emerging and resurging vector-borne diseases, 53
Congruence
  higher-level phylogeny of Diptera and, 396–421
Conifers
  Anthocoridae bionomics and, 216
  canopy mites and biodiversity, 13
Conservative risk-spreading
  population biology and, 535–56
Constitutive expression
  cytochrome P450 enzymes and, 507–26
Continuous in vitro culture
  entomophagous insects and, 576–78
Conus striatus
  insect voltage-gated sodium channel and, 431
Convolvulus spp.
  insects as human food and, 31
Copidosoma floridanum
  entomophagous insects and, 571–72
Coprotica spp.
  Dipteran wing veins and, 120
Copulation
  Cerambycid reproductive behavior and, 483–99
Copy DNA (cDNA)
  cytochrome P450 enzymes and, 507–26
Coreidae
  insect pests of pigeonpea and, 82
Coriander sativum
  stingless bees in crop pollination, 197
Corixidae
  insects as human food and, 37
Corydalus spp.
  insects as human food and, 39
Corylus spp.
  Anthocoridae bionomics and, 217–18
Corynebacterium spp.
  odor-mediated behavior of Afrotropical malaria mosquitoes and, 140
Coryneform spp.
  odor-mediated behavior of Afrotropical malaria mosquitoes and, 145

Cosmolestes spp.
insect pests of pigeonpea and, 84
Cossidiae
insects as human food and, 35
Costa
Dipteran wing veins and, 102–4, 115
Costa Rica
cassava pest management and, 348
stingless bees in crop pollination, 186, 188, 191
Cotesia spp.
Anthocoridae bionomics and, 214
entomophagous insects and, 568, 572
Cotinis nitida
edaphic arthropod adaptaptions and, 241
Courtship feeding
mate choice in tree crickets and kin, 371–91
Crataegus spp.
Anthocoridae bionomics and, 221
Crickets
edaphic arthropod adaptaptions and, 243–45
mate choice theory and, 371–91
Crops
Lepidoptera control by baculoviruses and, 261, 264, 266–67
stingless bees in crop pollination, 183–200
crossveinless gene
Dipteran wing veins and, 115
Crotoniidae
canopy mites and biodiversity, 4
Crowding
density-dependent physiological phase and, 317–34
"Cryptic" female choice
mate choice in tree crickets and kin, 387
Cryptostigmata
canopy mites and biodiversity, 2
Cryptus albitarsus
entomophagous insects and, 571
Ctenocephalides felis
emerging and resurging vector-borne diseases, 67
Cuba
cassava pest management and, 345, 359
emerging and resurging vector-borne diseases, 55
Cubitus
Dipteran wing veins and, 102–4, 116
Cucurbita spp.
stingless bees in crop pollination, 195
Culex spp.
emerging and resurging vector-borne diseases, 53, 58, 138
odor-mediated behavior of Afrotropical malaria mosquitoes and, 131–49
Culicoides paraensis
emerging and resurging vector-borne diseases, 58
Culicomorpha
Dipteran wing veins and, 116
higher-level phylogeny of Diptera and, 397–421
Culiseta spp.
odor-mediated behavior of Afrotropical malaria mosquitoes and, 136–37
Culture methods
entomophagous insects and, 561–79
Cunaxidae
canopy mites and biodiversity, 9
Cupania guatamalensis
stingless bees in crop pollination, 186
Cupuaçu
stingless bees in crop pollination, 192
Cuticular hardening
density-dependent physiological phase and, 317–34
Cyclanthaceae
stingless bees in crop pollination, 198
Cyclocosmia torreya
edaphic arthropod adaptaptions and, 239
Cyclorrhapha
higher-level phylogeny of Diptera and, 397–421
Cydia pomonella
Lepidoptera control by baculoviruses and, 262
Cymbaeremaeidae
canopy mites and biodiversity, 4
Cynipid gall-makers
hyperparasitism and, 300
CYP genes
cytochrome P450 enzymes and, 507–8
Cyrtomenus bergi
cassava pest management and, 345, 347, 357–58
Cytochrome P450 enzymes
insect
bioactivation, 520–21
biochemistry, 514–16
CYP genes, 507–8

France
Anthocoridae bionomics and, 214
emerging and resurging vector-borne diseases, 60–61, 67
hyperparasitism and, 301
insects as human food and, 41
Lepidoptera control by baculoviruses and, 262–63, 266, 269
Frankliniella occidentalis
Anthocoridae bionomics and, 218–19, 222
Fraxinus spp.
Anthocoridae bionomics and, 217–18, 220
Frequency
mate choice in tree crickets and kin, 378–80
Fruit
habitats under canopy mites and biodiversity, 10
Lepidoptera control by baculoviruses and, 266–67
Fungi
habitats under canopy mites and biodiversity, 7
pathogens and predators of ticks, 159, 163–64
Fungivores
canopy mites and biodiversity, 3

G

Galápagos Islands
Anthocoridae bionomics and, 209

Galleria mellonella
entomophagous insects and, 571–72, 574
insects as human food and, 44
Galls
Anthocoridae bionomics and, 207–22
Gallus domesticus
pathogens and predators of ticks, 171
Galumnatidae
canopy mites and biodiversity, 4
GAP irrigation project
emerging and resurging vector-borne diseases, 62, 65
Generalized feeders
Anthocoridae bionomics and, 207–22
Genetic engineering
Lepidoptera control by baculoviruses and, 257–81
Genetic polymorphisms
population biology and, 535–56
Genetics
cytochrome P450 enzymes and, 507–26
entomophagous insects and, 577
Geocoris punctipes
entomophagous insects and, 568, 575
Geolycosa micanopy
edaphic arthropod adaptaptions and, 239
Geometric mean fitness
population biology and, 537–38
Georgia
emerging and resurging vector-borne diseases, 59
Geotrigona spp.
stingless bees in crop pollination, 194
Germany
emerging and resurging vector-borne diseases, 60
hyperparasitism and, 304
insects as human food and, 37, 41
Lepidoptera control by baculoviruses and, 261–62, 266
pathogens and predators of ticks, 170
Gerris spp.
population biology and, 552
Gifts
courtship
mate choice in tree crickets and kin, 371
Gilpina hercyniae
Lepidoptera control by baculoviruses and, 259
Glaucomyx volans
emerging and resurging vector-borne diseases, 67
Global warming
emerging and resurging vector-borne diseases, 51, 69
Glossina spp.
odor-mediated behavior of Afrotropical malaria mosquitoes and, 131
Glycine max
Lepidoptera control by baculoviruses and, 269–73
Gonimbrasia belina
insects as human food and, 26, 29–30
Goniopora spp.
insect voltage-gated sodium channel and, 431
Grandjeania spp.
canopy mites and biodiversity, 5
Granulosis virus
Lepidoptera control by baculoviruses and, 257–81
Grazers
canopy mites and biodiversity, 1
Great Britain
insects as human food and, 37
Greece
emerging and resurging vector-borne diseases, 61
Green mite
cassava pest management and, 350–51
Grooming activity
host
pathogens and predators of ticks, 159
Gryllidae
mate choice in tree crickets and kin, 371–91
population biology and, 549–51
Gryllotalpidae
edaphic arthropod adaptaptions and, 245, 250
Gryllus firmus
population biology and, 549–50
Gryon spp.
insect pests of pigeonpea and, 83, 87
Guadeloupe
pathogens and predators of ticks, 167, 171
Guam
Anthocoridae bionomics and, 209
Guano Islands
pathogens and predators of ticks, 166, 169
Guatemala
Lepidoptera control by baculoviruses and, 262–65
stingless bees in crop pollination, 204
Guava
stingless bees in crop pollination, 194
Guyana
emerging and resurging vector-borne diseases, 66
Gynamisa maia
insects as human food and, 26–27
Gypsy moth
hyperparasitism and, 294–95

H

Habitats
Anthocoridae bionomics and, 207–22
canopy mites and biodiversity, 1–13
edaphic arthropod adaptaptions and, 233–52
hyperparasitism and, 291–309
Habobracon hebetor
entomophagous insects and, 571
Haemogragarina spp.
pathogens and predators of ticks, 162
Hairless gene
Dipteran wing veins and, 110
Haiti
insect pests of pigeonpea and, 78
Halidayina spp.
Dipteran wing veins and, 120
Hantaviruses
emerging and resurging vector-borne diseases, 52
Haplozetidae
canopy mites and biodiversity, 4, 10
Harmina axyridis
entomophagous insects and, 569
Hattena spp.
canopy mites and biodiversity, 10
Hawaii
Anthocoridae bionomics and, 208–9, 212–13, 217, 219, 221
Lepidoptera control by baculoviruses and, 278

stingless bees in crop pollination, 188, 191
Hawthorn psyllids
hyperparasitism and, 301
Hedgehog gene
Dipteran wing veins and, 110
Helianthus annuus
stingless bees in crop pollination, 194–95
Helicoverpa spp.
entomophagous insects and, 570, 574
insect pests of pigeonpea and, 77, 79–81, 86–89
Lepidoptera control by baculoviruses and, 261–62, 264
Heliothis spp.
entomophagous insects and, 577
insect pests of pigeonpea and, 86
insect voltage-gated sodium channel and, 449, 451
Lepidoptera control by baculoviruses and, 261–62, 264
Hemilepistus reamuri
edaphic arthropod adaptaptions and, 243
Hemiptera
Anthocoridae bionomics and, 207–22
insect pests of pigeonpea and, 77, 79, 82–84, 87
insects as human food and, 37
pathogens and predators of ticks, 166
population biology and, 550
Herbivore feeding specialization
cytochrome P450 enzymes and, 521
Herse convolvuli
insects as human food and, 31
Heteronomy
hyperparasitism and, 291–309
Heteroptera
Anthocoridae bionomics and, 207–22
Heterorhabditis spp.
edaphic arthropod adaptaptions and, 249
pathogens and predators of ticks, 159
Hevea brasiliensis
stingless bees in crop pollination, 198
Hilarimorphidae
Dipteran wing veins and, 116
Hippoboscoidea
Dipteran wing veins and, 117
Hippodamia convergens
entomophagous insects and, 574
Histiostomatidae
canopy mites and biodiversity, 8
Holarctic
Anthocoridae bionomics and, 217
Holothyra
canopy mites and biodiversity, 11
Homology
Dipteran wing veins and, 121–22
Homona magnanima
Lepidoptera control by baculoviruses and, 262
Homoptera
insects as human food and, 43
population biology and, 551–52
Honeydew
entomophagous insects and, 563–64
Hoplocerambyx severus
insects as human food and, 34
Hoploseius spp.
canopy mites and biodiversity, 7
Hormones
cytochrome P450 enzymes and, 507–26
density-dependent physiological phase and, 321–23
Lepidoptera control by baculoviruses and, 257–81
Hornworms
cassava pest management and, 343–62
Host feeding
entomophagous insects and, 564–65
Host plant resistance
cassava pest management and, 343–62
Host plants
Cerambycid reproductive behavior and, 483–99
Host range
Lepidoptera control by baculoviruses and, 257–81
Host-seeking behavior
odor-mediated behavior of Afrotropical malaria mosquitoes and, 138–46
Host specificity/size
canopy mites and biodiversity, 1, 12–13
Human activities
Anthocoridae bionomics and, 207–22
Human immunodeficiency virus (HIV)
emerging and resurging vector-borne diseases, 61
Humerobates spp.
Anthocoridae bionomics and, 216
canopy mites and biodiversity, 4, 6, 8
Hungary
Lepidoptera control by baculoviruses and, 267
Hydrocarbons
biosynthesis of cytochrome P450 enzymes and, 519
Hymenoptera
Dipteran wing veins and, 111
edaphic arthropod adaptaptions and, 238, 241–42, 248
entomophagous insects and, 563–67, 570–71
hyperparasitism and, 293–94
insect pests of pigeonpea and, 77, 83–87
Lepidoptera control by baculoviruses and, 258
pathogens and predators of ticks, 167–68
Hypantrea cunea
Lepidoptera control by baculoviruses and, 262
Hyperdiversity
canopy mites and biodiversity, 2
Hyperparasitism
multitrophic ecology and behavior
ants, 307–8
aphid hyperparasitism, 302–8
bees, 300–1
Bombyliidae, 300
Bruchid beetles, 302
Coccinellid beetles, 301
Coleoptera, 301–2
Cynipid gall-makers, 300
Drosophilidae, 300
evolution, 293–94
foraging behavior, 305–7
gypsy moth, 294–95
habitat specificity, 304–5
hawthorn psyllids, 301
host specificity, 304–5
Hymenoptera, 293–94
leafcutter bees, 300–1
leafminers, 300
Lepidoptera, 294–98
mealybugs, 298–300
nonaphid hyperparasitism, 294–302

offspring sex allocation, 303–4
overview, 292–93, 308–9
pear Psylla, 301
perspectives, 292–93
primary parasitism, 293–94
psyllids, 301
reproductive potential, 302–3
sawflies, 301
sex ratio, 303–4
terminology, 293
wasps, 300–1
weevils, 301–2
Hypocephalus armatus
edaphic arthropod adaptaptions and, 245–46
Hypotrigona pothieri
stingless bees in crop pollination, 185

I

Idiobionts
entomophagous insects and, 567, 570–71
Idiomyia spp.
Dipteran wing veins and, 120
Imaginal discs
Dipteran wing veins and, 105, 107
Imbrasia ertli
insects as human food and, 30
India
cassava pest management and, 345
emerging and resurging vector-borne diseases, 53, 60–61, 63, 65–66, 68
insect pests of pigeonpea and, 81–85, 88, 90
insects as human food and, 31–32
Lepidoptera control by baculoviruses and, 261, 264
pathogens and predators of ticks, 173
stingless bees in crop pollination, 188, 191, 194–95, 197–98
Indigofera endocaphylla
stingless bees in crop pollination, 196
Indirect feeding damage
cassava pest management and, 346–47
Indirect hyperparasitoids
hyperparasitism and, 293
Indonesia
cassava pest management and, 344–45
emerging and resurging vector-borne diseases, 56, 58
stingless bees in crop pollination, 195
Induction
cytochrome P450 enzymes and, 507–26
Industrial insecticides
insect voltage-gated sodium channel and, 441–43
Infraorders
higher-level phylogeny of Diptera and, 404–5, 407–8
Inkoo virus
emerging and resurging vector-borne diseases, 58
Inoculum potency
Lepidoptera control by baculoviruses and, 274–75
Insecticides
chemical control of virus vectors, 457–70
cytochrome P450 enzymes and, 507–26
insect voltage-gated sodium channel and, 429–52
Lepidoptera control by baculoviruses and, 257–81
Insect-vectored viruses
chemical mediation of vector behavior, 459–63
epidemiology and chemical control, 463–66
future research, 469–70
insecticides, 458–59, 467
oils, 467–69
Insect voltage-gated sodium channel
insecticides and bioinsecticides, 447–48
DDT and analogues, 443–44
future research, 451–52
industrial insecticides, 441–43
insecticide resistance, 448–51
insect sodium channel, 435–48
insect vs mammal toxicity, 446–47
neurotoxins from arachnid venoms, 439–41
para locus, 435–38
perspectives, 430
pharmacologic flexibility, 438–41, 448–51
sodium conductance, 444–46
structure/function relationships, 432–34
voltage-gated sodium channel, 430–41
Instars
density-dependent physiological phase and, 317–34
Insurance crop
cassava pest management and, 361
Integrated pest management (IPM)
Anthocoridae bionomics and, 207–22
cassava pest management and, 343–62
Internal organs
density-dependent physiological phase and, 317–34
Intraspecific responses
density-dependent physiological phase and, 317–34
Invertebrates
Lepidoptera control by baculoviruses and, 257–81
In vitro culture
entomophagous insects and, 569–78
In vivo sequential passage
Lepidoptera control by baculoviruses and, 279
Iowa
population biology and, 550
Irian Jaya
insects as human food and, 34–35
Irrigation
emerging and resurging vector-borne diseases, 51
Islands
Anthocoridae bionomics and, 207–22
Lepidoptera control by baculoviruses and, 269
Isle of Lewis
Lepidoptera control by baculoviruses and, 269
Isopoda
edaphic arthropod adaptaptions and, 237–238, 243
Isoptera
edaphic arthropod adaptaptions and, 241
Israel
Anthocoridae bionomics and, 209
density-dependent physiological phase and, 318

emerging and resurging vector-borne diseases, 60
Italy
Anthocoridae bionomics and, 220
emerging and resurging vector-borne diseases, 58, 61
insects as human food and, 41
Itoplectis conquisitor
entomophagous insects and, 568
Ixodes spp.
pathogens and predators of ticks, 159–74
Izodophagus hookeri
pathogens and predators of ticks, 160

J

Jackfruit
stingless bees in crop pollination, 196
Jamaica
stingless bees in crop pollination, 194
Japan
Anthocoridae bionomics and, 209, 218
canopy mites and biodiversity, 5, 8
hyperparasitism and, 300
insects as human food and, 33–34
Lepidoptera control by baculoviruses and, 262, 267
stingless bees in crop pollination, 193
Japanese encephalitis
emerging and resurging vector-borne diseases, 53, 58
Jatropha gossypifolia
stingless bees in crop pollination, 197
Java
stingless bees in crop pollination, 194, 196, 198
Jeannelopsis spp.
Dipteran wing veins and, 120
Jugatala spp.
canopy mites and biodiversity, 8
Juglans spp.
Anthocoridae bionomics and, 217
Julbernardia panuculata
insects as human food and, 28
Juvenile hormone
cytochrome P450 enzymes and, 507–26
density-dependent physiological phase and, 321–22

K

Kairomones
Anthocoridae bionomics and, 215, 217
odor-mediated behavior of Afrotropical malaria mosquitoes and, 132–49
Kala azar
emerging and resurging vector-borne diseases, 53, 60–61
Kenya
Anthocoridae bionomics and, 212, 221
cassava pest management and, 350
emerging and resurging vector-borne diseases, 57
insect pests of pigeonpea and, 78, 81, 84–85
insects as human food and, 45
pathogens and predators of ticks, 165, 171, 173
Kill speed
Lepidoptera control by baculoviruses and, 257–81
Kinshasa
insects as human food and, 23–24
Knock-down resistance
insect voltage-gated sodium channel and, 429–52
Koinobionts
entomophagous insects and, 567, 571–73
Kyasanur forest disease
emerging and resurging vector-borne diseases, 52

L

Lacebugs
cassava pest management and, 359–60
Lachnosterna spp.
insects as human food and, 42
Laelapidae
canopy mites and biodiversity, 7
lanceolate gene
Dipteran wing veins and, 119
Land invasion
edaphic arthropod adaptaptions and, 233–52
Larval feeding activity
Lepidoptera control by baculoviruses and, 257–81
Larval host plant
Cerambycid reproductive behavior and, 483–99
Lasiochilus spp.
Anthocoridae bionomics and, 211–12, 214–15, 217, 222–23
Lasioseius spp.
canopy mites and biodiversity, 10
Lassa fever
emerging and resurging vector-borne diseases, 52
Latin America
cassava pest management and, 343–62
emerging and resurging vector-borne diseases, 53–56, 58–59, 62–63, 66–67
insect pests of pigeonpea and, 78
insects as human food and, 35–40
Lauraceae
stingless bees in crop pollination, 197–98
Law of unintended consequences
emerging and resurging vector-borne diseases, 66
Leafcutter bees
hyperparasitism and, 300–1
Leafhoppers
chemical control of virus vectors, 464
Leafminers
hyperparasitism and, 300
Lecythidaeae
stingless bees in crop pollination, 197
Leg modifications
edaphic arthropod adaptaptions and, 246–48
Leguminosae
stingless bees in crop pollination, 196
Leishmania spp.
emerging and resurging vector-borne diseases, 62–63
Leishmaniasis
emerging and resurging vector-borne diseases, 51, 53, 60–63

Lepidoptera
control by baculoviruses and, 257–81
Dipteran wing veins and, 111
hyperparasitism and, 294–98
insect pests of pigeonpea and, 77, 79–82
insects as human food and, 38–39, 44
pathogens and predators of ticks, 166–67
population biology and, 553–54
Leptocera spp.
Dipteran wing veins and, 120
Leptopilina heterotoma
entomophagous insects and, 571
Lethocerus indicus
insects as human food and, 45
Leucanthemum vulgare
order-mediated behavior and, sugar-feeding behavior, 137
Lice
emerging and resurging vector-borne diseases, 66–67
Lichnanthe vulpina
edaphic arthropod adaptaptions and, 240
Lilia spp.
Anthocoridae bionomics and, 211–12
Limonia spp.
Dipteran wing veins and, 115
Linyphia litigiosa
population biology and, 555
Liodidae
canopy mites and biodiversity, 4
Liometopum spp.
insects as human food and, 36
Litchee
stingless bees in crop pollination, 195
Litter
canopy mites and biodiversity, 2–5
Lixophaga diatraceae
entomophagous insects and, 568, 573
Lizards
pathogens and predators of ticks, 168–69
Locomotion
edaphic arthropod adaptaptions and, 243, 245–48
Longevity
entomophagous insects and, 561–79
Longicorn beetles
Cerambycid reproductive behavior and, 483–99
Long-range search
hyperparasitism and, 291–309
Loudness
mate choice in tree crickets and kin, 380–82
Louisiana
Lepidoptera control by baculoviruses and, 259–60, 272
pathogens and predators of ticks, 167
Lyctocoris spp.
Anthocoridae bionomics and, 213, 216–18, 222–23
Lydella thompsoni
entomophagous insects and, 574
Lygaeidae
population biology and, 550
Lygistorrhina spp.
Dipteran wing veins and, 113, 120–21
Lychee
stingless bees in crop pollination, 195
Lymantria spp.
Lepidoptera control by baculoviruses and, 261, 263
population biology and, 555
Lyme disease
emerging and resurging vector-borne diseases, 53, 59

M

Macadamia integrifolia
stingless bees in crop pollination, 188
Macrolophus caligunosus
entomophagous insects and, 576
Macroptery
population biology and, 552
Macrotermes spp.
insects as human food and, 24, 31
Macrotrachiella nigra
Anthocoridae bionomics and, 222
Madagascar
emerging and resurging vector-borne diseases, 58, 69
insects as human food and, 22
Magacephala carolina
edaphic arthropod adaptaptions and, 239
Magicicada septemdecim
edaphic arthropod adaptaptions and, 245
population biology and, 551–52
Maine
Anthocoridae bionomics and, 216
Malaise trap samples
canopy mites and biodiversity, 3
Malaria
emerging and resurging vector-borne diseases, 51, 53–55, 61, 63, 69
odor-mediated behavior of Afrotropical malaria mosquitoes and, 131–49
Malawi
emerging and resurging vector-borne diseases, 57
insect pests of pigeonpea and, 78, 82, 85
insects as human food and, 23, 25–26
Malaysia
stingless bees in crop pollination, 191, 195–96
Malexsezia spp.
odor-mediated behavior of Afrotropical malaria mosquitoes and, 140
Malphigia punicifolia
stingless bees in crop pollination, 198
Malus spp.
Anthocoridae bionomics and, 218, 220
Mamestra brassicae
Lepidoptera control by baculoviruses and, 258, 263
Mammals
canopy mites and biodiversity, 13
pathogens and predators of ticks, 172
Manduca sexta
entomophagous insects and, 570
Mangifera indica
stingless bees in crop pollination, 191
Manihot esculenta
cassava pest management and, 343–62
Manilkara zapotilla
Anthocoridae bionomics and, 218
Manota spp.
Dipteran wing veins and, 120
Mansonia spp.
odor-mediated behavior of Afrotropical malaria mosquitoes and, 136, 139, 143

Mapati
  stingless bees in crop pollination, 192
Marine arthropods
  edaphic arthropod adaptaptions and, 233–52
Maruca spp.
  insect pests of pigeonpea and, 77, 79, 81–82, 87
Massachussetts
  Anthocoridae bionomics and, 216
  edaphic arthropod adaptaptions and, 240
Mass rearing
  entomophagous insects and, 568–69
Matarhizum spp.
  pathogens and predators of ticks, 159
Mate choice
  Cerambycid reproductive behavior and, 483–99
  odor-mediated behavior of Afrotropical malaria mosquitoes and, 132–49
  in tree crickets and their kin
    benefits, 383–85
    black-horned tree cricket, 380
    causes, 375–76
    choice by repeated mating, 387–88
    courtship feeding, 383–88

    perspectives, 371–72
    pheromones, 382
    postcopulatory choice, 386–87
    power, 380–82
    preference vs choosiness, 375
    rejection, 385–86
    repeatability, 385
    song preferences, 376–82
    species indicators, 377
    stabilizing preferences, 377
    temporal characters, 377–78
    tree crickets, 373–74
    variation in choosiness, 388–89
    variation in preferences, 389
    vibratory signals, 382
Maternal generation
  density-dependent physiological phase and, 317–34
Matsucoccus spp.
  Anthocoridae bionomics and, 214–15, 217
May's size gap
  canopy mites and biodiversity, 2–3, 11–13
Mealybugs
  cassava pest management and, 343–62
  hyperparasitism and, 298–300
Medial features
  Dipteran wing veins and, 102–4, 116
Mediterranean basin
  emerging and resurging vector-borne diseases, 53, 61
  insect pests of pigeonpea and, 78
Megadiversity
  canopy mites and biodiversity, 2
Melanagromyza spp.
  insect pests of pigeonpea and, 77, 90
Melanization
  density-dependent physiological phase and, 321
Melanocoris spp.
  Anthocoridae bionomics and, 213, 215–16
melanogaster gene
  Dipteran wing veins and, 120
Melanogromyza spp.
  insect pests of pigeonpea and, 84–85, 88–89
Melanoplus spretus
  insects as human food and, 41
Melipona spp.
  insects as human food and, 37
  stingless bees in crop pollination, 183–200
Mermithidae
  pathogens and predators of ticks, 164–65
Mesostigmata
  canopy mites and biodiversity, 1, 4–7, 9
Metabolism
  density-dependent physiological phase and, 317–34
  insecticide
    cytochrome P450 enzymes and, 507–26
  insect voltage-gated sodium channel and, 429–52
Metalimnobia spp.
  Dipteran wing veins and, 115
Metapopulation risk-spreading
  population biology and, 535–56
Metarhizium anisopliae
  edaphic arthropod adaptaptions and, 250–51
Mexico
  Anthocoridae bionomics and, 212
  canopy mites and biodiversity, 7
  insects as human food and, 22, 36–39
  pathogens and predators of ticks, 167
  stingless bees in crop pollination, 191, 194, 197
Micreremidae
  canopy mites and biodiversity, 4
Micrygone cana
  insects as human food and, 29
Microhabitat diversity
  canopy mites and, 1–13
Micronesia
  Anthocoridae bionomics and, 209
Microorganisms, see also Bacteria
  entomopathogenic, ticks and, 159–74
Microplitis croceipies
  entomophagous insects and, 572
Microsomes
  cytochrome P450 enzymes and, 507–26
Microstylum spp.
  Dipteran wing veins and, 112
Middle East
  emerging and resurging vector-borne diseases, 60, 68
  insect pests of pigeonpea and, 82
  insects as human food and, 43
  Lepidoptera control by baculoviruses and, 261, 266
  pathogens and predators of ticks, 171
Migration
  density-dependent physiological phase and, 317–34
Migration polyphenisms
  population biology and, 535–56
Milichiidae
  Dipteran wing veins and, 118
Minilivestock
  insects as human food and, 21–45

Minnesota
emerging and resurging vector-borne diseases, 59
Mites
cassava pest management and, 343–62
forest canopy biodiversity and, 1–13
pathogens and predators of ticks, 166
Mitochondria
cytochrome P450 enzymes and, 516
Mixed function oxidases
cytochrome P450 enzymes and, 507–26
Mobility
edaphic arthropod adaptaptions and, 233–52
Mochlozetidae
canopy mites and biodiversity, 4, 10
Molecular biology
Dipteran wing veins and, 105, 107–11, 118–21
Molting
density-dependent physiological phase and, 317–34
Mononychellus tanajoa
cassava pest management and, 345
Monooxygenases
cytochrome P450 enzymes and, 507–26
Monophyly
higher-level phylogeny of Diptera and, 397–421
Montandiola spp.
Anthocoridae bionomics and, 207–22
Monynychellus progresivus
cassava pest management and, 350–51
Moraceae
stingless bees in crop pollination, 192, 196
Mormonomyia argentifrons
insect pests of pigeonpea and, 84
Morphology
antennal
Cerambycid reproductive behavior and, 495–96
density-dependent physiological phase and, 317–34
Mosquitoes
emerging and resurging vector-borne diseases, 57–58, 63–66
order-mediated behavior and behavioral factors, 133–34
distribution, 133
ecological factors, 133–34
field studies, 142–45
future challenges, 148–49
host-seeking behavior, 138–46
introduction, 132
laboratory studies, 140–42
malaria transmission, 133
malaria vectors in Africa, 133–34
mate finding and recognition, 136–37
mating behavior, 135–37
mosquito-host interactions in multipartite context, 145–46
overview, 134–35
oviposition behavior, 146–48
perspectives, 148–49
sensory physiology studies, 142
species, 133
sugar-feeding behavior, 137–38
Moths
pathogens and predators of ticks, 166–67
Movement
Anthocoridae bionomics and, 210–12
density-dependent physiological phase and, 317–34
Mozambique
emerging and resurging vector-borne diseases, 57
Multitrophic ecology
hyperparasitism and, 291–309
insect pests of pigeonpea and, 85–88
Musca domestica vicina
insects as human food and, 33
Muscidae
Dipteran wing veins and, 118
Muscidifurax spp.
entomophagous insects and, 568
Muscomorpha
Dipteran wing veins and, 115–16
higher-level phylogeny of Diptera and, 397–421
Mutagenesis
cytochrome P450 enzymes and, 507–26
insect voltage-gated sodium channel and, 429–52
Myanmar
emerging and resurging vector-borne diseases, 66
insect pests of pigeonpea and, 78
Mycetophilidae
Dipteran wing veins and, 118
Mycolaelaps maxinae
canopy mites and biodiversity, 7
Myrciaria dubia
stingless bees in crop pollination, 192
Myriapods
canopy mites and biodiversity, 13
Myrmecocystus spp.
insects as human food and, 37
Myrtaceae
stingless bees in crop pollination, 192, 194
Mythicomiinae
Dipteran wing veins and, 112
Myzus persicae
Anthocoridae bionomics and, 219
chemical control of virus vectors, 461

N

Nanche
stingless bees in crop pollination, 198
Nannotrigona testaceicornis
stingless bees in crop pollination, 193
narrow gene
Dipteran wing veins and, 119
Nasonovia ribis-nigri
chemical control of virus vectors, 461
Natural selection
insect voltage-gated sodium channel and, 429–52
Nearctic
Anthocoridae bionomics and, 217
Nematocera
Dipteran wing veins and, 115–16
higher-level phylogeny of Diptera and, 397–421
Nematodes
entomopathogenic ticks and, 159–74
Neocypholaelaps spp.
canopy mites and biodiversity, 10
Neorhinotora spp.
Dipteran wing veins and, 120

Neotoma spp.
Anthocoridae bionomics and, 223
Neotropics
canopy mites and biodiversity, 8, 10–11
cassava pest management and, 345–46, 352–54, 360
stingless bees in crop pollination, 186, 188
Nepal
emerging and resurging vector-borne diseases, 53, 61
insect pests of pigeonpea and, 78
Netherlands
Anthocoridae bionomics and, 221
emerging and resurging vector-borne diseases, 67
Lepidoptera control by baculoviruses and, 263, 267
Neurotoxins
insect voltage-gated sodium channel and, 429–52
New Zealand
canopy mites and biodiversity, 5
Lepidoptera control by baculoviruses and, 260
pathogens and predators of ticks, 171
Niches
edaphic arthropod adaptaptions and, 233–52
Nidicola spp.
Anthocoridae bionomics and, 215, 222–23
Nigeria
cassava pest management and, 345
emerging and resurging vector-borne diseases, 58
insect pests of pigeonpea and, 78, 83–84
insects as human food and, 25
Nilaparvata lugens
chemical control of virus vectors, 462
Noctonectidae
insects as human food and, 37
Noctuidae
insect pests of pigeonpea and, 79
insects as human food and, 35
Nomia quadridentata
stingless bees in crop pollination, 196
Nonhost feeding
entomophagous insects and, 564–65
Nonindigenous species
Anthocoridae bionomics and, 207–22
North America
Anthocoridae bionomics and, 212, 216–22
canopy mites and biodiversity, 6
hyperparasitism and, 301
North Carolina
emerging and resurging vector-borne diseases, 60
Nosema spp.
pathogens and predators of ticks, 162
Notogalumna spp.
canopy mites and biodiversity, 5
Nova Scotia
Anthocoridae bionomics and, 216
Nuclear polyhedrosis virus
Lepidoptera control by baculoviruses and, 257–81
Nutrition
Cerambycid reproductive behavior and, 483–99
entomophagous insects and, 561–79
insects as human food and, 21–45
Nymphaea ampla
stingless bees in crop pollination, 186

O

Oak canopy
canopy mites and biodiversity, 3
Obligate hyperparasitoids
hyperparasitism and, 293–94, 309
Occlusion bodies
Lepidoptera control by baculoviruses and, 258, 277
Oceania
insects as human food and, 31–35
Oceanic islands
Anthocoridae bionomics and, 207–22
Oceans
edaphic arthropod adaptaptions and, 233–52
Odor-mediated behavior
afrotropical malaria mosquitoes and, 132–49
Offspring sex allocation
hyperparasitism and, 303–4
Ogcodes spp.
Dipteran wing veins and, 120
Oils
chemical control of virus vectors, 457–70
Oklahoma
emerging and resurging vector-borne diseases, 60
Olagamasidae
canopy mites and biodiversity, 6
Olfactory cues
odor-mediated behavior of Afrotropical malaria mosquitoes and, 132–49
Ologamasidae
canopy mites and biodiversity, 9
Oman
insect pests of pigeonpea and, 82
Oncopeltus fasciatus
population biology and, 550
Ondinea purpurea
stingless bees in crop pollination, 186
Onion
stingless bees in crop pollination, 193
O'nyong-nyong fever
emerging and resurging vector-borne diseases, 52, 57
Ooencyrtus spp.
entomophagous insects and, 571
insect pests of pigeonpea and, 83, 87–88
Oregon
Anthocoridae bionomics and, 215, 221
Orgyia pseudotsugata
Lepidoptera control by baculoviruses and, 263
Oribatida
canopy mites and biodiversity, 1–3, 5–6, 10–12
Oribatulidae
canopy mites and biodiversity, 4, 10
Oriental spotted fever
emerging and resurging vector-borne diseases, 52
Oripodidae
canopy mites and biodiversity, 4
Orius spp.
Anthocoridae bionomics and, 207–22
insect pests of pigeonpea and, 87

Ormyrus spp.
insect pests of pigeonpea and, 85
Ornamentals
Anthocoridae bionomics and, 221–22
Oropouche virus
emerging and resurging vector-borne diseases, 52, 58
Orthoptera
canopy mites and biodiversity, 13
Dipteran wing veins and, 111
edaphic arthropod adaptaptions and, 245
insects as human food and, 25, 39
mate choice in tree crickets and kin, 371–91
population biology and, 549–51
Orungo virus
emerging and resurging vector-borne diseases, 58
Oryctes rhinoceros
Lepidoptera control by baculoviruses and, 260
Osmoregulation
edaphic arthropod adaptaptions and, 233–52
Oviposition
Cerambycid reproductive behavior and, 491
odor-mediated behavior of Afrotropical malaria mosquitoes and, 132–49
spatial distribution of population biology and, 535–56
Oxalidaceae
stingless bees in crop pollination, 191–92
Oxpeckers
pathogens and predators of ticks, 159, 169–70
Oxya spp.
insects as human food and, 33
Oxygen
edaphic arthropod adaptaptions and, 235–41

P

Pachycrepoideus spp.
entomophagous insects and, 569
Pacific Northwest
Anthocoridae bionomics and, 220–21
Pakistan
emerging and resurging vector-borne diseases, 62, 69
insect pests of pigeonpea and, 82
Palaearctic region
Anthocoridae bionomics and, 209, 218, 220, 223
Palestine
emerging and resurging vector-borne diseases, 68
Palexorista laxa
entomophagous insects and, 574
Panama
cassava pest management and, 348
stingless bees in crop pollination, 197–98
Panama hat plant
stingless bees in crop pollination, 198
Papua New Guinea
emerging and resurging vector-borne diseases, 66
insects as human food and, 21–22, 34–35
stingless bees in crop pollination, 194, 198
Paraguay
cassava pest management and, 349, 355, 359
insects as human food and, 35–36
Lepidoptera control by baculoviruses and, 270
para locus
insect voltage-gated sodium channel and, 435–38
Paraphyly
higher-level phylogeny of Diptera and, 397–421
Parasites
canopy mites and biodiversity, 1, 3–4
entomophagous insects and, 561–79
insect pests of pigeonpea and, 83
Parasitoids
entomophagous insects and, 563–65
primary
hyperparasitism and, 291–309
Paratrechina longicornis
insect pests of pigeonpea and, 87
Paratriphleps laeviusculus
Anthocoridae bionomics and, 207–22
Partamona grandipennis
stingless bees in crop pollination, 186
Passive attraction
mate choice in tree crickets and kin, 381
Pastures
Lepidoptera control by baculoviruses and, 257–81
Pathogens
of ticks
biological control and, 159–74
Pears
hyperparasitism and, 301
Pedaliaceae
stingless bees in crop pollination, 197
Pediculus humanus
emerging and resurging vector-borne diseases, 66
Pentatomidae
insect pests of pigeonpea and, 82
Peponapis spp.
stingless bees in crop pollination, 195
Permian
higher-level phylogeny of Diptera and, 396–421
Peru
Anthocoridae bionomics and, 210
canopy mites and biodiversity, 5
cassava pest management and, 348, 359
emerging and resurging vector-borne diseases, 63
insects as human food and, 35
Lepidoptera control by baculoviruses and, 263, 266
pathogens and predators of ticks, 166
stingless bees in crop pollination, 192, 198
Pesticides
microbial
Lepidoptera control by baculoviruses and, 257–81
Pests
cassava pest management and, 343–62
pigeonpea and, 77–91
Phase
density-dependent physiological phase and, 316–34
Phaseolus spp.
insect pests of pigeonpea and, 78, 87

Phenacoccus herreni
cassava pest management and, 346, 352–53
Phenotypic quality
mate choice in tree crickets and kin, 371–91
Phenotypic variation
population biology and, 535–56
Pheromones
cytochrome P450 enzymes and, 519
density-dependent physiological phase and, 329–30
mate choice in tree crickets and kin, 382
Philippines
Anthocoridae bionomics and, 221
cassava pest management and, 345
insect pests of pigeonpea and, 85
insects as human food and, 31
stingless bees in crop pollination, 191
Phlebotomus spp.
emerging and resurging vector-borne diseases, 61–63
Phoridae
Dipteran wing veins and, 117–18, 120
Phryxe caudata
entomophagous insects and, 573
Phthorimaea operculella
Lepidoptera control by baculoviruses and, 263
Phyletic phenocopies
Dipteran wing veins and, 97–124
Phyllophaga spp.
insects as human food and, 42
Phylloplane
habitats under canopy mites and biodiversity, 8–10
Phylogeny
Dipteran wing veins and, 97–124
Diptera and, 396–421
Phytophagy
Anthocoridae bionomics and, 207–22
Phytoseiidae
canopy mites and biodiversity, 6, 9
Phytotelmata
habitats under canopy mites and biodiversity, 7–8
Pieridae
insects as human food and, 38
population biology and, 553–54
Pieris rapae
Lepidoptera control by baculoviruses and, 263
population biology and, 553–54
Pigeonpea
insect pests and, 77–91
Pigmentation
density-dependent physiological phase and, 317–34
Pineus pini
Anthocoridae bionomics and, 221
Pinus spp.
Anthocoridae bionomics and, 216–17, 221
Pirate bugs
minute
Anthocoridae bionomics and, 207–22
Pityrosporum spp.
odor-mediated behavior of Afrotropical malaria mosquitoes and, 140
Plague
emerging and resurging vector-borne diseases, 51, 53
Planthoppers
chemical control of virus vectors, 465
Plants
Anthocoridae bionomics and, 207–22
canopy mites and biodiversity, 1, 3–4
cassava pest management and, 343–62
Cerambycid reproductive behavior and, 483–99
entomophagous insects and, 563–64
hyperparasitism and, 291–309
Lepidoptera control by baculoviruses and, 274–75
stingless bees in crop pollination, 183–203
Plasmodium spp.
emerging and resurging vector-borne diseases, 63–66
odor-mediated behavior of Afrotropical malaria mosquitoes and, 131, 133
Plastron bubble
edaphic arthropod adaptaptions and, 240
Plateremaeoidea
canopy mites and biodiversity, 4
Platypezidae
Dipteran wing veins and, 118
Plebeia mosquito
stingless bees in crop pollination, 187
plexus gene
Dipteran wing veins and, 110
Plodia interpunctella
Lepidoptera control by baculoviruses and, 263
Plutella xylostella
Lepidoptera control by baculoviruses and, 263
Podisus spp.
entomophagous insects and, 575
Poecilosomella spp.
Dipteran wing veins and, 120
Poland
Lepidoptera control by baculoviruses and, 267
Pollination
stingless bees in crop pollination, 183–200
Polybia occidentalis
insects as human food and, 37
Polymorphisms
Anthocoridae bionomics and, 207–22
cytochrome P450 enzymes and, 507–26
population biology and, 535–56
Polyphenisms
density-dependent physiological phase and, 317–34
population biology and, 535–56
Polyrhachis vicina
insects as human food and, 33
Popillia japonica
edaphic arthropod adaptaptions and, 251
Population biology
risk-spreading and bet-hedging
conservative vs diversifying risk spreading, 538–40
dimensions across which risk can be spread, 541
environmental uncertainty, 538–40
evidence, 546–55
facultative diapause, 549–52
future research, 555–56
genetic polymorphism vs risk-spreading, 540–41
geometric mean fitness, 537–38
metapopulation-risk spreading, 543–45

migration polyphenisms, 552–53
miscellaneous traits, 555
overview, 536–37
spatial distribution of oviposition, 553–54
temporal-risk spreading, 541–43
theory, 537–46
within-generation-risk spreading, 545–46
Population density
density-dependent physiological phase and, 317–34
Populus spp.
Anthocoridae bionomics and, 217–18, 220
Poronotellus sodalis
Anthocoridae bionomics and, 217
Portugal
emerging and resurging vector-borne diseases, 60–61
Positional information
Dipteran wing veins and, 108–10
Postcopulatory choice
mate choice in tree crickets and kin, 386–87
Pot-feeding/sucking insects
insect pests of pigeonpea and, 79–84
Potasi virus
emerging and resurging vector-borne diseases, 52
Pourouma ceropiaefolia
stingless bees in crop pollination, 192
Power
mate choice in tree crickets and kin, 380–82
Predators
Anthocoridae bionomics and, 207–22
biological control and, 159–74
canopy mites and biodiversity, 1, 3, 7, 9
entomophagous insects and, 561–79
Preference
mate choice in tree crickets and kin, 371–91
Primary hosts
hyperparasitism and, 291–309
Prionus californicus
Cerambycid reproductive behavior and, 485
Proctolelaps spp.
canopy mites and biodiversity, 10
Prokelisia marginata
population biology and, 552–53
Prostigmata
canopy mites and biodiversity, 3–4, 6, 9
Proteaceae
stingless bees in crop pollination, 188
Protoplasa fitchii
Dipteran wing veins and, 113
Protozoa
pathogens and predators of ticks, 162–63
Prunus spp.
Anthocoridae bionomics and, 217–18
Pseudogonia rufifrons
entomophagous insects and, 574
Pseudohyperparasitoids
hyperparasitism and, 300
Pseudolimnophila spp.
Dipteran wing veins and, 115
Pseudoplusia includens
Lepidoptera control by baculoviruses and, 259
Psidium guava
stingless bees in crop pollination, 194
Psorophora spp.
odor-mediated behavior of Afrotropical malaria mosquitoes and, 139
Psychodidae
Dipteran wing veins and, 112
Psychodomorpha
higher-level phylogeny of Diptera and, 397–421
Psylla pyri
hyperparasitism and, 301
Pterogramma spp.
Dipteran wing veins and, 120
Ptilotrigona lurida
stingless bees in crop pollination, 193
Ptychopteridae
Dipteran wing veins and, 116
Puerto Rico
cassava pest management and, 354
insect pests of pigeonpea and, 78
population biology and, 550
Purshia tridentata
Anthocoridae bionomics and, 215
Pyemotes tritici
insect voltage-gated sodium channel and, 448
Pyralidae
insect pests of pigeonpea and, 79
Pyrus spp.
Anthocoridae bionomics and, 218

Q

Quality control
entomophagous insects and, 577
Quercus spp.
Anthocoridae bionomics and, 217–18, 223

R

Radiation
edaphic arthropod adaptaptions and, 233–52
Radius
Dipteran wing veins and, 102–4, 115–16
radius incompletus gene
Dipteran wing veins and, 110
Rambutan
stingless bees in crop pollination, 195
Rattan
stingless bees in crop pollination, 196
Rearing
entomophagous insects and, 561–79
Receptor-binding sites
insect voltage-gated sodium channel and, 429–52
Reddish coloration hormone
density-dependent physiological phase and, 321
Redox partners
cytochrome P450 enzymes and, 515–16
Regulation
cytochrome P450 enzymes and, 507–26
Rejection
during courtship
mate choice in tree crickets and kin, 371
Repeated mating
mate choice in tree crickets and kin, 387–88
Reproductive potential
Cerambycid beetles and, 483–99
density-dependent physiological phase and, 325–26

entomophagous insects and, 561–79
hyperparasitism and, 302–3
Reptiles
canopy mites and biodiversity, 13
pathogens and predators of ticks, 168–69
Resistance
cassava pest management and, 343–62
insecticide
cytochrome P450 enzymes and, 507–26
insect voltage-gated sodium channel and, 429–52
Lepidoptera control by baculoviruses and, 272–73
Resource utilization
entomophagous insects and, 566–67
Respiration
edaphic arthropod adaptaptions and, 238–41
Reticulitermes flavipes
edaphic arthropod adaptaptions and, 251
Rhinoseius spp.
canopy mites and biodiversity, 10
rhomboid locus
Dipteran wing veins and, 101, 108
rho mutant
Dipteran wing veins and, 110
Rhynchophorus spp.
insects as human food and, 22, 25, 34, 36, 45
Rhyncosia minima
insect pests of pigeonpea and, 84
Rickettsia spp.
emerging and resurging vector-borne diseases, 67–68
pathogens and predators of ticks, 161
Rift Valley fever
emerging and resurging vector-borne diseases, 53
Riptortus spp.
insect pests of pigeonpea and, 82
Risk-spreading
population biology and, 535–56
Robsonomyia spp.
Dipteran wing veins and, 120
Rocio virus
emerging and resurging vector-borne diseases, 52, 58
Rocky Mountain spotted fever
emerging and resurging vector-borne diseases, 60
Rodents
emerging and resurging vector-borne diseases, 68–69
pathogens and predators of ticks, 159, 172
Rosaceae
stingless bees in crop pollination, 193
Ross River virus
emerging and resurging vector-borne diseases, 53, 57–59
Rubber
stingless bees in crop pollination, 198
Rubiaceae
stingless bees in crop pollination, 194
Rural communities
insects as human food and, 21–45
Ruspolia differens
insects as human food and, 31
Russia
emerging and resurging vector-borne diseases, 58, 67
Lepidoptera control by baculoviruses and, 262–63, 266, 268–69
pathogens and predators of ticks, 160, 165, 167–68
Rutaceae
stingless bees in crop pollination, 196
Rwanda
emerging and resurging vector-borne diseases, 69

S

Salix spp.
Anthocoridae bionomics and, 217–18, 220
salm mutant
Dipteran wing veins and, 108, 111
Samia ricini
insects as human food and, 31–32
Sandfly vectors
emerging and resurging vector-borne diseases, 60–63
Sap fluxes
habitats under canopy mites and biodiversity, 7–8
Sapindaceae
stingless bees in crop pollination, 195
Sarawak
stingless bees in crop pollination, 186
Saren
stingless bees in crop pollination, 198
Saturniidae
insects as human food and, 24–26, 28–29
Sawflies
hyperparasitism and, 301
scalloped gene
Dipteran wing veins and, 109
Scapheremaeus spp.
canopy mites and biodiversity, 8
Scapteriscus spp.
edaphic arthropod adaptaptions and, 243–45
Scaptomyza spp.
Dipteran wing veins and, 120
Scaptotrigona spp.
insects as human food and, 37
stingless bees in crop pollination, 192
Scarabeidae
edaphic arthropod adaptaptions and, 245
Scarites subterraneus
edaphic arthropod adaptaptions and, 247
Scatopsidae
Dipteran wing veins and, 116
Scavengers
canopy mites and biodiversity, 1
Scelionidae
insect pests of pigeonpea and, 83
Scheloribates latipes
canopy mites and biodiversity, 6, 10
Schizophora
Dipteran wing veins and, 112, 116
higher-level phylogeny of Diptera and, 397–421
Sciaroidea
Dipteran wing veins and, 116
Scoloposcelis spp.
Anthocoridae bionomics and, 210–11, 213, 215–16
Scotland
Lepidoptera control by baculoviruses and, 269
Seasonal colonization
Lepidoptera control by baculoviruses and, 260

Seasonal yield losses
cassava pest management and, 347
Sechium edule
stingless bees in crop pollination, 191
Secondary pests
cassava pest management and, 347–50
Seed feeding
insect pests of pigeonpea and, 84–85
Sejidae
canopy mites and biodiversity, 7
Sellnickia spp.
canopy mites and biodiversity, 5
Semiochemicals
odor-mediated behavior of Afrotropical malaria mosquitoes and, 132–49
Senegal
emerging and resurging vector-borne diseases, 60
pathogens and predators of ticks, 169
Sensillar polyphenism
density-dependent physiological phase and, 321
Sensory bias
mate choice in tree crickets and kin, 371
Sensory physiology
odor-mediated behavior of Afrotropical malaria mosquitoes and, 142
Sensory system
density-dependent physiological phase and, 317–34
Sequential induction of phase
density-dependent physiological phase and, 328–32
Sergentomyia shortii
emerging and resurging vector-borne diseases, 61
Sex ratio
hyperparasitism and, 291, 303–4
Sexual selection
mate choice in tree crickets and kin, 371–91
"Sexy sons"
mate choice in tree crickets and kin, 372
Seychelles
Anthocoridae bionomics and, 209, 211
emerging and resurging vector-borne diseases, 56
shifted gene
Dipteran wing veins and, 119
short gastrulation gene
Dipteran wing veins and, 111
Shrews
pathogens and predators of ticks, 172
Siberia
Anthocoridae bionomics and, 218
Sibling insects
density-dependent physiological phase and, 317–34
Signal transduction
density-dependent physiological phase and, 317–34
Sisal
stingless bees in crop pollination, 198
Sister groups
higher-level phylogeny of Diptera and, 396–421
Sitka spruce canopy
canopy mites and biodiversity, 3
Sitotroga cerealella
entomophagous insects and, 569
Size distribution shortfall
canopy mites and biodiversity, 1–13
Sleeping sickness
emerging and resurging vector-borne diseases, 69
Smallholder farmers
cassava pest management and, 343–62
Soap-nut
stingless bees in crop pollination, 195
Sodium channels
voltage-gated insecticides and, 429–52
Soils
canopy mites and biodiversity, 2–5
edaphic arthropod adaptaptions and, 233–52
Solanaceae
stingless bees in crop pollination, 197
Solanum melongena
stingless bees in crop pollination, 197
Solar radiation
Lepidoptera control by baculoviruses and, 275–76
Song preferences
mate choice in tree crickets and kin, 376–82
South Africa
Anthocoridae bionomics and, 209, 212
insect pests of pigeonpea and, 82
insects as human food and, 22, 29–30
odor-mediated behavior of Afrotropical malaria mosquitoes and, 133
pathogens and predators of ticks, 171
South Carolina
emerging and resurging vector-borne diseases, 60
Southeast Asia
Anthocoridae bionomics and, 221
Lepidoptera control by baculoviruses and, 261, 276
South Korea
insects as human food and, 34
South Pacific
stingless bees in crop pollination, 188
Soviet Union
former
Anthocoridae bionomics and, 209
Soybean
Lepidoptera control by baculoviruses and, 260, 269–73
Soybean caterpillar
Lepidoptera control by baculoviruses and, 257–81
Spain
Anthocoridae bionomics and, 209, 220
emerging and resurging vector-borne diseases, 61
Lepidoptera control by baculoviruses and, 267
Spalangia spp.
entomophagous insects and, 568
Spathiphyllum friedrichsthalii
stingless bees in crop pollination, 186
Species recognition
mate choice in tree crickets and kin, 371
Specificity
habitat
hyperparasitism and, 291–309
host
canopy mites and biodiversity, 1, 12–13

Sphaeridium scarabaeoides
edaphic arthropod adaptaptions and, 239
Sphaeroceridae
Dipteran wing veins and, 118, 120
Sphodros abboti
edaphic arthropod adaptaptions and, 239
Spiders
canopy mites and biodiversity, 13
pathogens and predators of ticks, 159, 166
Spodoptera spp.
Anthocoridae bionomics and, 214
Lepidoptera control by baculoviruses and, 260, 263–65
Sporocarps
fungal
habitats under canopy mites and biodiversity, 7
Squash
stingless bees in crop pollination, 195–96
Sri Lanka
Anthocoridae bionomics and, 219
emerging and resurging vector-borne diseases, 53, 63–64
insect pests of pigeonpea and, 82, 85
Stabilizing preferences
mate choice in tree crickets and kin, 377
Staphylinidae
edaphic arthropod adaptaptions and, 245
Steganinae
Dipteran wing veins and, 118
Stegomyia spp.
emerging and resurging vector-borne diseases, 53
Steinernema spp.
edaphic arthropod adaptaptions and, 249
pathogens and predators of ticks, 159
Stems
habitats under canopy mites and biodiversity, 8
Stenodontes damicornis
insects as human food and, 22
Stenomorphus californicus
edaphic arthropod adaptaptions and, 248
Sterculiaceae
stingless bees in crop pollination, 192
Stigmaeidae
canopy mites and biodiversity, 9
Stingless bees
crop pollination and
Agavaceae, 198
Agave sisalana, 198
Alliaceae, 193
Allium cepa, 193

Theobroma grandiflorum, 192–93
Zingiberaceae, 198
St. Louis encephalitis
emerging and resurging vector-borne diseases, 69
Stored products
Anthocoridae bionomics and, 222–23
Stratiomyomorpha
higher-level phylogeny of Diptera and, 397–421
Strawberry
stingless bees in crop pollination, 193
Strichodactyla helianthus
insect voltage-gated sodium channel and, 448
Subcosta
Dipteran wing veins and, 102–4, 115
Subterranean existence
edaphic arthropod adaptaptions and, 233–52
Subtropical countries
insects as human food and, 21–45
Sudan
emerging and resurging vector-borne diseases, 61–62
pathogens and predators of ticks, 173
Sugar-feeding behavior
cassava pest management and, 343
odor-mediated behavior of Afrotropical malaria mosquitoes and, 137–38
Sunflower
stingless bees in crop pollination, 194–95

Superfamilies
higher-level phylogeny of Diptera and, 397–421
Supplemental feeding
entomophagous insects and, 561–79
Surface feeders
Anthocoridae bionomics and, 207–22
Surinam
stingless bees in crop pollination, 191, 196, 204
Sweet pepper
stingless bees in crop pollination, 197
Switzerland
Anthocoridae bionomics and, 221
Lepidoptera control by baculoviruses and, 262, 266–67
Symbioribatidae
canopy mites and biodiversity, 4
Symbiotic associates
habitats under canopy mites and biodiversity, 1, 3–4, 10–11
Sympherobius amicukus
entomophagous insects and, 566
Synergy
insect voltage-gated sodium channel and, 429–52
Synneuridae
Dipteran wing veins and, 116
Synovigenic species
entomophagous insects and, 565
Syria
emerging and resurging vector-borne diseases, 62
Syrphidae
Dipteran wing veins and, 117
Systematics
Anthocoridae bionomics and, 208–10
Dipteran wing veins and, 97–124

T

Tabanomorpha
higher-level phylogeny of Diptera and, 397–421
Tachinidae
insect pests of pigeonpea and, 84
Tahyna virus
emerging and resurging vector-borne diseases, 58
Taiwan
insect pests of pigeonpea and, 84
Lepidoptera control by baculoviruses and, 264
Tanaostigmodes cajaninae
insect pests of pigeonpea and, 85
Tanyderidae
Dipteran wing veins and, 112
Tanzania
emerging and resurging vector-borne diseases, 57
insect pests of pigeonpea and, 78, 82–85
order-mediated behavior and, sugar-feeding behavior, 137
pathogens and predators of ticks, 169
Tarsonemellini
canopy mites and biodiversity, 10
Tarsonemidae
canopy mites and biodiversity, 5–6, 8–11
Tea crops
Lepidoptera control by baculoviruses and, 267
Telonomus spp.
entomophagous insects and, 571, 573
insect pests of pigeonpea and, 83
Temnostethus gracilis
Anthocoridae bionomics and, 210, 217
Temperature
Lepidoptera control by baculoviruses and, 275–76
Temporal risk-spreading
population biology and, 535–56
Tenebrio molitor
insects as human food and, 44
Tennessee
emerging and resurging vector-borne diseases, 60
Tenuipalpidae
canopy mites and biodiversity, 9
Tephritidae
Dipteran wing veins and, 117
Termites
canopy mites and biodiversity, 13
insects as human food and, 24
Terrestrial evolution
edaphic arthropod adaptaptions and, 233–52
Tessaratoma papillosa
entomophagous insects and, 577
Tetranychidae
canopy mites and biodiversity, 9
Tetranychoidea
canopy mites and biodiversity, 9
Tetraphleps spp.
Anthocoridae bionomics and, 207–22
Tetrastichus schoenobii
entomophagous insects and, 571
Tettigoniidae
insects as human food and, 31, 45
Texas
Anthocoridae bionomics and, 210
Lepidoptera control by baculoviruses and, 272
pathogens and predators of ticks, 165
Thailand
Anthocoridae bionomics and, 212, 219
cassava pest management and, 345
emerging and resurging vector-borne diseases, 56–57, 66
insects as human food and, 22, 32–33, 45
Lepidoptera control by baculoviruses and, 263–64
stingless bees in crop pollination, 187, 196
Theileria spp.
pathogens and predators of ticks, 163
Theobroma grandiflorum
stingless bees in crop pollination, 192
Thrips
chemical control of virus vectors, 464
Ticks
canopy mites and biodiversity, 11–12
emerging and resurging vector-borne diseases, 59–60
pathogens and predators of
Acarina, 165–66
amphibians, 168

tick cannibalism, 165–66
toads, 168
tortoises, 168
vertebrates, 172–73
virus-like particles, 161
viruses, 161
Tilia spp.
Anthocoridae bionomics and, 217
Tipulidae
Dipteran wing veins and, 115–16
Tipulomorpha
higher-level phylogeny of Diptera and, 397–421
Toads
pathogens and predators of ticks, 168
Top-down control
hyperparasitism and, 292
Tortoises
pathogens and predators of ticks, 168
Toscana virus
emerging and resurging vector-borne diseases, 58
Toxins
insect
Lepidoptera control by baculoviruses and, 257–81
Trade-offs
mate choice in tree crickets and kin, 371
Transmission
chemical control of virus vectors, 457–70
Tree crickets
mate choice theory and, 371–91
Trees
Anthocoridae bionomics and, 219–21
Cerambycid reproductive behavior and, 483–99
Trench fever
emerging and resurging vector-borne diseases, 53, 66–67
Triassic
higher-level phylogeny of Diptera and, 397–421
Tribolium confusum
Anthocoridae bionomics and, 223
Trichogramma spp.
entomophagous insects and, 569–70, 576–78
insect pests of pigeonpea and, 86–87
Trichomyiinae
Dipteran wing veins and, 115
Trichoplusia ni
entomophagous insects and, 572
Lepidoptera control by baculoviruses and, 265
Trichoptera
insects as human food and, 34
Trichoribates spp.
canopy mites and, 6
Trigona spp.
insects as human food and, 28, 37
stingless bees in crop pollination, 183–200
Trinidad
cassava pest management and, 359
emerging and resurging vector-borne diseases, 58
stingless bees in crop pollination, 191, 194
Triplochiton scleroxylon
insects as human food and, 25
Trissolcus basalis
entomophagous insects and, 571
Trivial movement
Anthocoridae bionomics and, 210–11
Trophic level
fourth
hyperparasitism and, 291–309
Tropics
cassava pest management and, 343
insects as human food and, 21–45
Tropicoseius spp.
canopy mites and biodiversity, 10
True hyperparasitoids
hyperparasitism and, 293
Tuckerellidae
canopy mites and biodiversity, 8
Tunisia
emerging and resurging vector-borne diseases, 61
Lepidoptera control by baculoviruses and, 263, 266
Tuparezetidae
canopy mites and biodiversity, 4
Turkey
Anthocoridae bionomics and, 209
emerging and resurging vector-borne diseases, 62, 65
Tydeidae
canopy mites and biodiversity, 9

U

Uganda
cassava pest management and, 345, 350
emerging and resurging vector-borne diseases, 57
insect pests of pigeonpea and, 78, 82, 85
Ultrabithorax gene
Dipteran wing veins and, 109
United Kingdom
Anthocoridae bionomics and, 209–10, 220, 222
emerging and resurging vector-borne diseases, 60
Lepidoptera control by baculoviruses and, 280–81
United States
Anthocoridae bionomics and, 209–10, 212, 214–16, 221–22
canopy mites and biodiversity, 7
cassava pest management and, 354
edaphic arthropod adaptaptions and, 240
emerging and resurging vector-borne diseases, 53–54, 56, 59–60, 63, 67

insects as human food and, 41–45
Lepidoptera control by baculoviruses and, 259–70, 272–73, 280
pathogens and predators of ticks, 160, 165–68, 171
population biology and, 549–51
Unpredictable variable environments
population biology and, 535–56
Urbanization
emerging and resurging vector-borne diseases, 51
Uropodidae
canopy mites and biodiversity, 6–7, 9
Uruguay
emerging and resurging vector-borne diseases, 55
Usta terpsichore
insects as human food and, 25
Uvilla
stingless bees in crop pollination, 192

V

Vagility
Cerambycid reproductive behavior and, 483–99
Vector-borne disease
chemical control of insect vectors, 457–70
emerging and resurging
Aedes aegypti, 55–57
Anopheles, 57
Australia, 57–58
Barmah Forest virus and vectors, 57–58
dengue haemorrhagic fever and vectors, 55–57
factors, 54–60
introduction, 51–53
mosquitoes, 57–58
Ross River virus and vectors, 57–58
vector distridution and density, 54–55
odor-mediated behavior of Afrotropical malaria mosquitoes and, 131–49
O'nyong-nyong fever and vectors, 57
Vegetation
natural
stingless bees in crop pollination, 183–200
vein-off gene
Dipteran wing veins and, 120
Veins
Dipteran wings and, 97–24
Venezuela
canopy mites and biodiversity, 5, 12
cassava pest management and, 344, 348–49, 359
emerging and resurging vector-borne diseases, 56, 59
insect pests of pigeonpea and, 78
insects as human food and, 39
Lepidoptera control by baculoviruses and, 262, 266
Venezuelan equine encephalitis
emerging and resurging vector-borne diseases, 53
Venezuelan hemorrhagic fever
emerging and resurging vector-borne diseases, 52
Venom
arachnid
insect voltage-gated sodium channel and, 429–52
ventral veinless gene
Dipteran wing veins and, 110
Venturia canescens
entomophagous insects and, 567, 572
Vertebrates
insect voltage-gated sodium channel and, 429–52
pathogens and predators of ticks, 172–73
Vespidae
insects as human food and, 36
Vibratory signals
mate choice in tree crickets and kin, 382
Vietnam
cassava pest management and, 344
insect pests of pigeonpea and, 84
Lepidoptera control by baculoviruses and, 264
Virginia
population biology and, 551
Virus-like particles
pathogens and predators of ticks, 161
Viruses
chemical control of virus vectors, 457–70
Lepidoptera control by baculoviruses and, 257–81
pathogens and predators of ticks, 161
Visiting behavor
stingless bees in crop pollination, 183–88, 191–200
Volatile plant compounds
Anthocoridae bionomics and, 207–22
Voltage gating
insect sodium channels and, 429–52
Voltinism
population biology and, 549–50

W

Washington State
Anthocoridae bionomics and, 221
Wasps
canopy mites and biodiversity, 12
hyperparasitism and, 300–1
Water
edaphic arthropod adaptaptions and, 235–41
Weevils
hyperparasitism and, 301–2
Wesselbron virus
emerging and resurging vector-borne diseases, 58
West Africa
odor-mediated behavior of Afrotropical malaria mosquitoes and, 133, 137
Western attitude
insects as human food and, 21–45
wg mutant
Dipteran wing veins and, 109
Whiteflies
cassava pest management and, 343–62
chemical control of virus vectors, 464–65
Wing polymorphism
Anthocoridae bionomics and, 207–22
Wing polyphenism
density-dependent physiological phase and, 316–34
Wing veins
Dipteran, 97–24
Wisconsin
emerging and resurging vector-borne diseases, 59

Within-generation risk-spreading
population biology and, 535–56
Wollastoniella rotunda
Anthocoridae bionomics and, 219
Wood-boring beetles
Cerambycid reproductive behavior and, 483–99
World Health Organization (WHO)
emerging and resurging vector-borne diseases, 64
Wyeomia spp.
odor-mediated behavior of Afrotropical malaria mosquitoes and, 139
population biology and, 550

X

Xanthippe spp.
canopy mites and biodiversity, 10
Xenoglossa spp.
stingless bees in crop pollination, 195
Xenopsylla cheopis
emerging and resurging vector-borne diseases, 68
Xenopus laevis
insect voltage-gated sodium channel and, 436–38, 441
Xerospermum intermedium
stingless bees in crop pollination, 186
Xyleutes spp.
insects as human food and, 35
Xylocoris spp.
Anthocoridae bionomics and, 208, 211–17, 222–23
Xylophagomorpha
higher-level phylogeny of Diptera and, 397–421

Y

Yamatotipula spp.
Dipteran wing veins and, 115
Yellow fever
emerging and resurging vector-borne diseases, 53–54
Yemen
insect pests of pigeonpea and, 82
Yersinia pestis
emerging and resurging vector-borne diseases, 68–69
Yield-pest relationships
cassava pest management and, 345–50
Yugoslavia
former
Anthocoridae bionomics and, 219
ecology and behavior, 300
emerging and resurging vector-borne diseases, 67

Z

Zaire
cassava pest management and, 352
insects as human food and, 23–24
Zambia
insects as human food and, 23, 26–28
Zika virus
emerging and resurging vector-borne diseases, 58
Zimbabwe
insect pests of pigeonpea and, 82
insects as human food and, 23, 30–31
Lepidoptera control by baculoviruses and, 265
pathogens and predators of ticks, 167
Zinga virus
emerging and resurging vector-borne diseases, 58
Zingiberaceae
stingless bees in crop pollination, 198
Zonocerus variegatus
cassava pest management and, 345
Zoonotic agents
emerging and resurging vector-borne diseases, 52
Zoophytophagy
Anthocoridae bionomics and, 214
